

How Appwrite fits together

One API in front of every backend service. Every box below is a container in the same `docker compose` file — the same one that runs Appwrite Cloud.

CLIENTS_

Client SDKs

Web, Flutter, Apple, Android, React Native

Server SDKs

Node, Python, PHP, Ruby, Go, Dart, .NET, Kotlin, Swift

Console

The dashboard is just another API client

EDGE_

Traefik — the one entry point

TLS termination, routing, rate limits, custom domains through the Proxy service

`:80``:443`

API_

REST

The `appwrite` container. Every service, one contract.

GraphQL

Same resolvers, generated from the same routes.

Realtime

WebSocket channels, pushed from Redis pub/sub.
